SOLUTIONS

ABOUT VECOSYS

THE POWER OF EXPERIENCE

VECOSYS Ltd. has a history of more than 7 years, but the core of our team has an even longer past in the field of parking technology and access control systems. Over the years we have had to demonstrate our professional skill and preparedness in many projects and we have never missed the opportunity to prove our knowledge.

READY FOR INNOVATION

Acquired knowledge is a good foundation, but we can not go forward without progress. Not only market demands, but expectations for ourselves also inspire us to find new solutions to existing problems or to strike our feet in areas where we have not been yet.

WE FOCUS ON THE CLIENT

No matter where we are, we never lose sight of the fact that our primary goal is to meet our customers' expectations by providing real solutions to real problems. Whether it comes to rethinking previous ideas or satisfying new needs, we always offer a solution!

OUR SOLUTIONS

PARKING TECHNOLOGIES

We offer various answers for the continuously increasing demand for modern parking systems: P&D machines equipped with modern payment methods, automated pay-on-foot systems for heavy traffic, parking bay sensors and displays, and its' cloud-based remote management systems.

INNOVATIVE SOLUTIONS

Innovation plays an important role in our company's life. Smart cities and modern customers require the latest solutions for smart parking. We are searching for and integrate the newest technologies, like modern sensors, vehicle identification systems, IoT and smartphones based traffic solutions, cloud-based data management and monitoring systems.

ACCESS CONTROL SYSTEMS

Identification of people or cars isn't a problem anymore. We can provide you with fingerprint detection, radio-frequency identification, automatic number plate recognition or even more. We offer a wide range of turnstiles, barriers and retractable bollards for the management of physical access.

QUEUE MANAGEMENT

Our queue management system helps organizations and businesses to reduce waiting times and improve customer satisfaction. The touch-screen based check-in terminal is freely programmable, modifications could be done quickly and easily. The large LCD display screen provides maximum visibility and comfort.

TRAFFIC MANAGEMENT

Our traffic light controller offers an adaptive solution which is able to operate based on the traffic flow. The modern vehicle detectors give almost a free hand for the engineers to organise traffic smoothly. These solutions can be used in an industrial environment, too. Our traffic lights are all equipped with up to date LED units.

TICKETS AND CONSUMABLES

We distribute a wide range of tickets, cards, RFID identifiers and cleaning supplies required for the operation of parking systems. We offer top quality blank, pre-printed, roll or leporello tickets. Cards and identifiers can be ordered with a unique design.
