

CONTACTLESS PAYMENT PARKING TECHNOLOGIES

THE CHALLENGE

Győr-Szol decided to upgrade 5 of their Pay&Display machines to accept PayPass / PayWave bank cards. This development aimed to raise customer satisfaction, reduce cash flow and minimize the loss of revenue and time caused by jammed coins.

THE SOLUTION

In cooperation with Hectronic and Monera, VECOSYS has installed a mobile internet modem, card reader and controller and new firmware into the CITEA machines. The task took less than 1 hour per machine.

The number of tickets paid by card has been rising steadily since then, so Győr-Szol plans to upgrade further P&D machines as well.

ADVANTAGES

- More convenient payment for parking
- Reduction of cash flow
- Quick installation
